

# Wet or dry, road or trail – the road never ends.

When you hit the road, the BFGoodrich Long Trail T/A Tour will ensure it's a smooth ride – no matter what weather comes your way.

It's built to deliver exceptional wet and dry performance on the highways and give you a smooth journey to your favourite destination. From asphalt to dirt tracks, the BFGoodrich Long Trail T/A Tour will get you there confidently.

It's the ideal tyre for touring, and has been designed with a sturdy shoulder construction for outstanding road cornering without compromising the smoothness of the ride. Add a special reinforced centre rib in the middle of the tread, and you have a tyre that feels centred at highway speeds with extraordinarily sharp car-like handling.

To ensure stability at higher speeds, the BFGoodrich Long Trail T/A Tour is designed with an Equal Tension Containment System (ETEC). With strategically placed reinforcement under the tread, ETEC minimises the effect of centrifugal forces that come into play at high speed.

BFGoodrich Long Trail T/A Tour

# the road never ends

## BFGOODRICH TIRES SUV AND SPORT TRUCK RANGE:

## TYPICAL VEHICLE MATCHES:

- Honda CRV
- Toyota Landcruiser
- Nissan X-Trail
- Hyundai Santa Fe
- Toyota RAV4

TAKE CONTROL

Long Trail T/A Tour

**Deep grooves that fight hydroplaning**

Deep circumferential grooves in the tread surface pump out water through wide channels to help avoid hydroplaning. By giving the water an easy exit, the tyre stays in contact with the road to provide better control in the wet.

**Reinforced centre rib**

The new tyre design features a special reinforced rib in the centre of the tread to give SUVs a positive on-centre feel at highway speeds. The centre rib allows you to take control with sharp, precise handling around bends.

**Strategic siping design for more grip in the wet**

Siping design can make or break a tyre's performance in the wet. These tiny but crucial tread block elements help gain traction in even the worst weather.

**Rigid shoulder for better performance**

The sturdy shoulder construction offers outstanding cornering. You'll have the grip and the endurance you need from a tyre on all types of road surfaces.

**Drive with confidence at higher speeds**

At highway speeds, centrifugal forces try to force a tyre to get taller and reduce contact with the road. This can make a vehicle unstable. The Equal Tension Containment System (ETEC) counters this with strategically placed reinforcement under the tread. ETEC enables the tyre to retain its shape at higher speeds and provide you with better safety when travelling at highway speeds.

**High-strength bead**

The sturdy bead construction allows the high loads of SUVs and light trucks to be carried easily without being too rigid. That way you don't have to sacrifice smooth driving for the strength you need off-road.
